

CHARGING INTO THE FUTURE

Problem: The market's **Ev Charging Bottleneck**

In the dynamic landscape of the burgeoning e-mobility market, a pressing challenge has emerged - a noticeable disparity between the growing number of electric vehicles on our roads and the insufficient infrastructure to support their charging needs.

Solution: Our dynamic load balancing system

Introducing our dynamic load balancing system, the antidote to the challenges posed by the current imbalance between the proliferation of electric vehicles and the limited charging infrastructure. In real-time, our system seamlessly applies a set of intelligent rules and algorithms, ensuring optimal distribution of electrical transactions. This not only addresses the existing issue but opens the door to a future where multiple users can harness the maximum potential of every electric vehicle charging session. Embrace efficiency and reliability.

Problem: Smart Chargers Are Becoming **Dumb Chargers**

In the current market scenario, the stability of electrical chargers averages at a concerning 60%. This dip in performance is primarily attributed to companies attempting to implement sophisticated applications on microcontrollers with limited resources

Solution: Our decentralized business logic

Our innovative solution decentralizes the business logic, redefining the roles of microcontrollers on charging points. They now have dual responsibilities: efficiently relaying all electrical information to the master controller and following instructions from it. All smart functionalities are consolidated in the high-performance master controller, ensuring that the charging points can exclusively focus on electrical transactions. This strategic distribution enhances stability, aiming for a remarkable 95%, while seamlessly incorporating the intelligent features demanded by the market. With our approach, reliability and smart capabilities reside in the powerful heart of the system – the master controller.

CHARGING INTO THE FUTURE

Business Model:

At the core of our business model is not just the sale of reliable charging points but a commitment to delivering an unparalleled user experience through cutting-edge software, ensuring efficient and dependable electrical transactions. A solution translated into simple but important hardware (the charging points) and multiple and optimized software modules. Our market strategy is strategically divided into three major milestones:

1. **Real Estate:** Catering to both new constructions and existing buildings looking to modernize their infrastructure.
2. **Headquarters:** Targeting forward-thinking enterprises aiming for an upgrade on their electric fleet, we provide comprehensive solutions to facilitate their transition towards eco-friendly and decarbonized transportation.
3. **Private and Public Sites:** Partnering with private institutions such as hospitals, shopping malls, and private parking facilities, we extend our reach to public spaces where electric vehicle charging is increasingly becoming a necessity.

Financial highlights:

After an intensive 8-month development phase, we anticipate securing our inaugural contract in 2025. Assuming we would only capture a modest percentage of the market share, we expect to reach a cumulative cash flow of nearly 5 million euros in the last month of the 4th year which also aligns with the first month being able to reach a net revenue of more than 500,000€.

Regarding this unique investment round and according to our conservative predictions, we expect an ROI of 546% after the first 4 years. Your initial investment stands to multiply nearly sixfold as we execute our strategic plans and capitalize on market opportunities.

Note:

Even before embarking on product development, we're aware of the interest from two prominent industry players in search of a solution for their upcoming projects. These established brands are actively seeking a partnership once we secure the essential investment needed to bring our solution to market. This early interest underscores the market demand for our solution and highlights the potential for impactful collaborations. With this knowledge, we're focused on expediting our processes to seize these valuable opportunities swiftly.
